Contribution documentation.

The Kitchen Guard system was designed by Kevin, Anton, Martin, and Emil. During the process of design, implementation, and testing of our system everyone contributed evenly. However, the main responsibility was as following:

Requirements: Martin

Design and architecture: Kevin

Implementation: Anton

Testing: Emil

To elaborate on the fact that everyone contributed evenly meant that everyone helped solve challenges and problems in every phase of the project. This allowed all of us to have a good understanding of every aspect of the system, while still having fucus point.
